

MPCI-GW2

LoRa Gateway Mini PCIe modules with SPI and USB interface

Data Sheet

Abstract

Technical data sheet describing MPCI-GW2 series LoRa gateway modules. The modules are a complete and cost efficient LoRa gateway solution offering up to 10 programmable parallel demodulation paths. It targeted at smart metering fixed networks and Internet of Things applications with up to 5000 nodes per km² in moderately interfered environment. . The modules have the industry standard PCI Express Mini Card form factor, which enables easy integration into an application board and is also ideal for manufacturing of small series.

1. Functional description

1.1. Overview

The MPCI-GW2 series comprises complete and cost efficient LoRa gateway modules in the industry standard PCI Express Mini Card form factor, which enables an easy integration into an application board and it is also ideal for manufacturing of small series.

MPCI-GW2 modules support 470-510MHz for China, 868MHz for Europe, 915MHz for North America over different regions.

MPCI-GW2 modules support up to -142 dBm sensitivity with SX1255/7 Tx/Rx front-end and max 27dBm TX power.

Typical applications are Smart Metering , Security Sensors Network, Agricultural Monitoring, Internet of Things (IoT) .

1.2. Product features

Module	Frequency	SPI	USB				
MPCI-GW2-00	433MHz	YES	YES				
MPCI-GW2-01	470MHz	YES	YES				
MPCI-GW2-10	868MHz	YES	YES				
MPCI-GW2-11	915MHz	YES	YES				

Table 1: MPCI-GW2 series main features summary

1.3. Block diagram

Block Diagram

Figure 1: MPCGI-GW2 series block diagram

As described Figure 1, each MPCGI-GW2 series module integrates one SX1301 chip and two SX1255/7 and other chip for RF signal, which represents the core of the device, providing the related LoRa modem and processing functionalities. Additional signal conditioning circuitry is implemented for PCI Express Mini Card compliance, and one U.FL connectors are available for easy antennas integration.

1.4. Product description

MPCI-GW2 series modules provide LoRa gateway multi-mode technology:

- MPCGI-GW2-00 is mainly designed for operation in China.
- MPCGI-GW2-01 is mainly designed for operation in Europe and other countries.
- MPCGI-GW2-10 is mainly designed for operation in America south-east Asia.

1.5. Supported features

Table 2 lists some of the main features supported by MPCGI-GW2 series modules.

Feature	Description
TRX Indication	Module has two on board LEDs to indication the status of TX or RX, the LEDs are controlled by PA_EN and LNA_EN respectively.
Multichannel	10 programmable parallel demodulation paths, up to 8 RX channel and 1 TX channel for 125K LoRa.
SPI Interface	The SPI interface gives access to the configuration register of SX1301 via a synchronous full-duplex protocol.
USB2.0 Interface	Module build in FT232H to convert SPI interface of SX1301 to USB2.0, which compatible with 3G/LTE card of mini-PCIe type.

Table 2: Some of the main features supported by MPCGI-GW2 series modules

2. Interfaces

2.1. Module supply input

MPCI-GW2 series modules must be supplied through the 3.3Vaux pins by a DC power supply. The voltage must be stable, because during this operation the current drawn from 3.3Vaux can vary significantly, based on the power consumption profile of the SX1301 chip(see SX1301 DS).

2.2. Antenna RF interfaces

The modules have one RF interfaces over a standard U.FL connectors (Hirose U.FL-R-SMT) with a characteristic impedance of 50. The RF port (ANT1) supports both Tx and Rx, providing the antenna interface.

2.3. SPI interface

A SPI interface is provided on the PCIe_SCK, PCIe_MISO, PCIe_MOSI, PCIe_CSN pins of the system connector. The SPI interface gives access to the configuration register of SX1301 via a synchronous full-duplex protocol. Only the slave side is implemented.

2.4. USB interface

MPCI-GW2 series modules can support high speed USB to SPI by FT2232H, it include a high-speed USB 2.0 compliant interface with maximum 480 Mb/s data rate, representing the interface for any communication with an external host application processor. The module itself acts as a USB device and can be connected to any USB host equipped with compatible drivers. For more information please refer to the data sheet of FT2232H.

2.5. RESET

MPCI-GW2 series includes the RESET active-high input signal to reset the radio operations as specified by the SX1301 Specification.

2.6. SPDT_SEL

MPCI-GW2 series includes the SPDT_SEL input for selecting SPI or USB interface. SPDT_SEL="H", USB Port Enable, SPDT_SEL="L", SPI Port Enable. Internal Pull UP, Default USB Port.

2.7. GPS_PPS

MPCI-GW2 series includes the GPS_PPS input for received packets time-stamped.

3. Pin definition

3.1. Pin assignment

No	PCI Express Mini Card E.M. Spec. Rev. 2.0	MPCI-GW2	Voltage domain	I/O	Description	Remarks
1	WAKE#	NC		N/A		Internally not connected

Table 4: MPCI-GW2 series system connector pin assignment

4. Electrical specifications

Stressing the device above one or more of the ratings listed in the Absolute Maximum Rating section may cause permanent damage. These are stress ratings only. Operating the module at these or at any conditions other than those specified in the Operating Conditions sections (chapter 4.1) of the specification should be avoided. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

Operating condition ranges define those limits within which the functionality of the device is guaranteed. Where application information is given, it is advisory only and does not form part of the specification.

4.1. Absolute maximum rating

Limiting values given below are in accordance with the Absolute Maximum Rating System (IEC 134).

Symbol	Description	Condition	Min.	Max.	Unit
3.3Vaux	Module supply voltage	Input DC voltage at 3.3Vaux pins	-0.3	3.6	V
USB	USB D+/D- pins	Input DC voltage at USB interface pins		3.6	V
SPDT_SEL	Port select	Input DC voltage at SPDT_SEL input pins	-0.3	3.6	V
RESET	MPCI reset input	Input DC voltage at RESET input pin	-0.3	3.6	V
SPI	SPI interface	Input DC voltage at SPI interface pin	-0.3	3.6	V
GPS_PPS	GPS 1 pps input	Input DC voltage at GPS_PPS input pin	-0.3	3.6	V
Rho_ANT	Antenna ruggedness	Output RF load mismatch ruggedness at ANT1		10:1	VSWR
Tstg	Storage Temperature		-40	85	°C

Table 5: Absolute maximum ratings

The product is not protected against overvoltage or reversed voltages. If necessary, voltage spikes exceeding the power supply voltage specification, given in table above, must be limited to values within the specified boundaries by using appropriate protection devices.

4.1.1. Maximum ESD

Parameter	Min	Typical	Max	Unit	Remarks
ESD sensitivity for all pins except ANT1			1000	V	Human Body Model according to JESD22-A114
ESD sensitivity for ANT1			1000	V	Human Body Model according to JESD22-A114
ESD immunity for ANT1			4000	V	Contact Discharge according to IEC 61000-4-2
			8000	V	Air Discharge according to IEC 61000-4-2

Table 6: Maximum ESD ratings

MPCI-GW2 modules are Electrostatic Sensitive Devices and require special precautions when handling. See section 7.2 for ESD handling instructions.

4.2. Operating conditions

Unless otherwise indicated, all operating condition specifications are at an ambient temperature of 25°C.

Operation beyond the operating conditions is not recommended and extended exposure beyond them may affect device reliability.

4.2.1. Operating temperature range

Parameter	Min.	Typical	Max.	Unit	Remarks
Normal operating temperature	−20	+25	+65	°C	Normal operating temperature range (fully functional and meet 3GPP specifications)
Extended operating temperature	−40		+85	°C	Extended operating temperature range (RF performance may be affected outside normal operating range, though module is fully functional)

Table 7: Environmental conditions

4.2.2. Supply/power pins

Symbol	Parameter	Min.	Typical	Max.	Unit
3.3Vaux	Module supply operating input voltage ¹⁴	3.00	3.30	3.60	V

Table 8: Input characteristics of Supply/Power pins

¹⁴ Input voltage at 3.3Vaux must be above the normal operating range minimum limit to switch-on the module.

4.2.3. Current consumption

Mode	Condition	Min	Typ	Max	Unit
Idle-Mode	All of the chip on the board enter idle mode or shutdown.	60	100		uA
Active-Mode (TX)	The power of TX channel is 20dBm and 3.3V supply.		360		mA
Active-Mode (RX)	TX disabled and shutdown PA.		490		mA

Table 9: Module 3.3Vaux supply current consumption

4.2.4. LoRa RF characteristics

MPCI-GW2 series LoRa RF characteristics are specified in the *SX1255/7 series Data Sheet*.

5. Mechanical specifications

MPCI-GW2 series modules are fully compliant to the 52-pin PCI Express Full-Mini Card Type F2 form factor, with top-side and bottom-side keep-out areas, with 50.95 mm nominal length, 30 mm nominal width and all the other dimensions as defined by the PCI Express Mini Card Electromechanical Specification [9] except for the card thickness (nominal value is 3.7 mm), as described in Figure 2. MPCI-GW2 series modules weight is about 9.7 g.

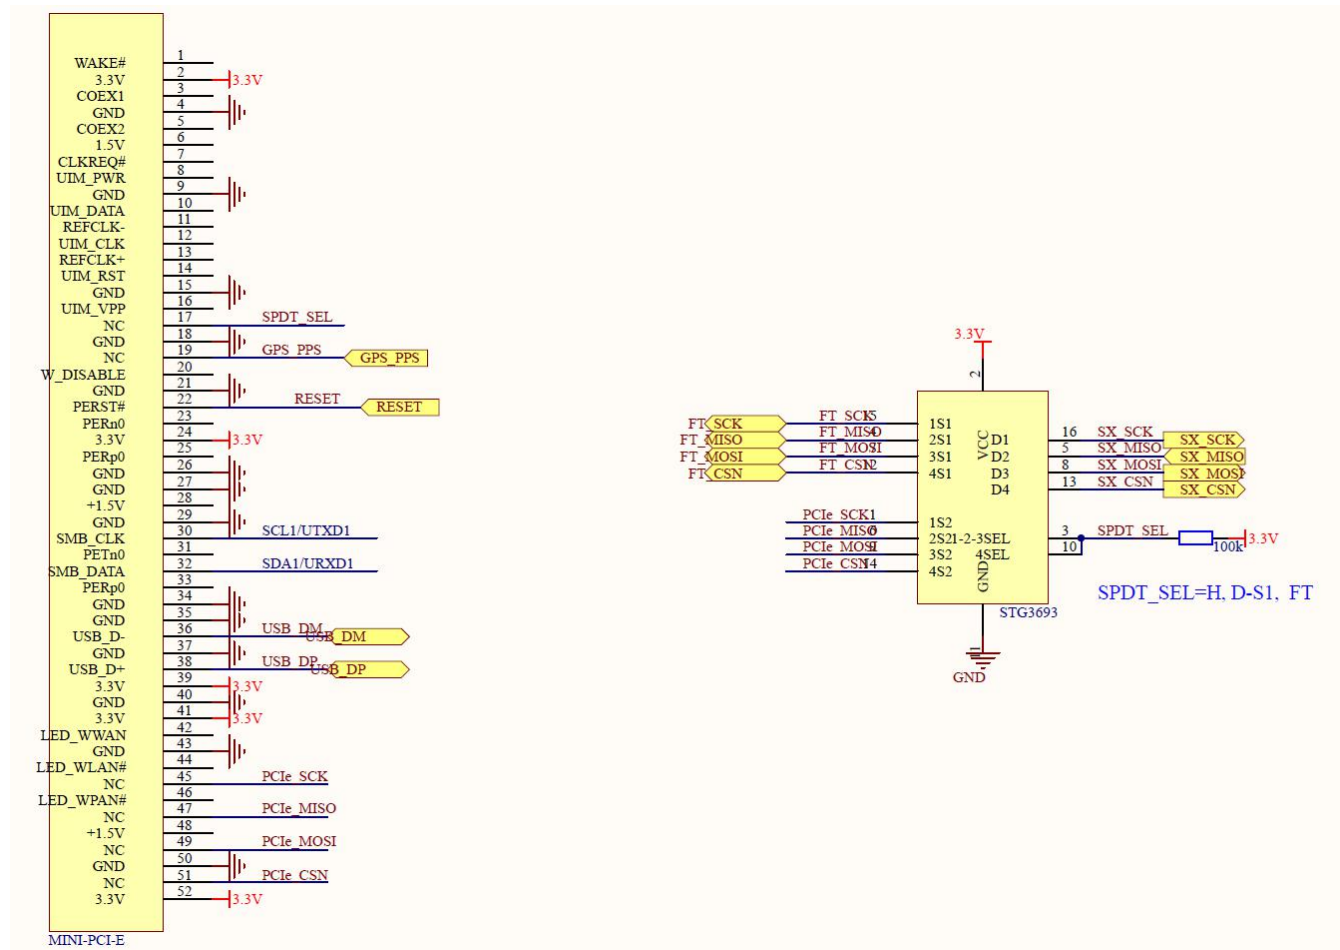

Figure 2: MPCI-GW2 series mechanical dimensions (top view, side view, bottom view)

For further details regarding mechanical specifications see the *PCI Express Mini Card Electromechanical Specification* [9].

6. Inner schematic

MPCI-GW2 series modules refer Semtech's reference design of SX1301, add a 4 channel SPDT to switch SPI of SX1301 to PCI edge connector or FT2232H which convert SPI to USB2.0 interface.

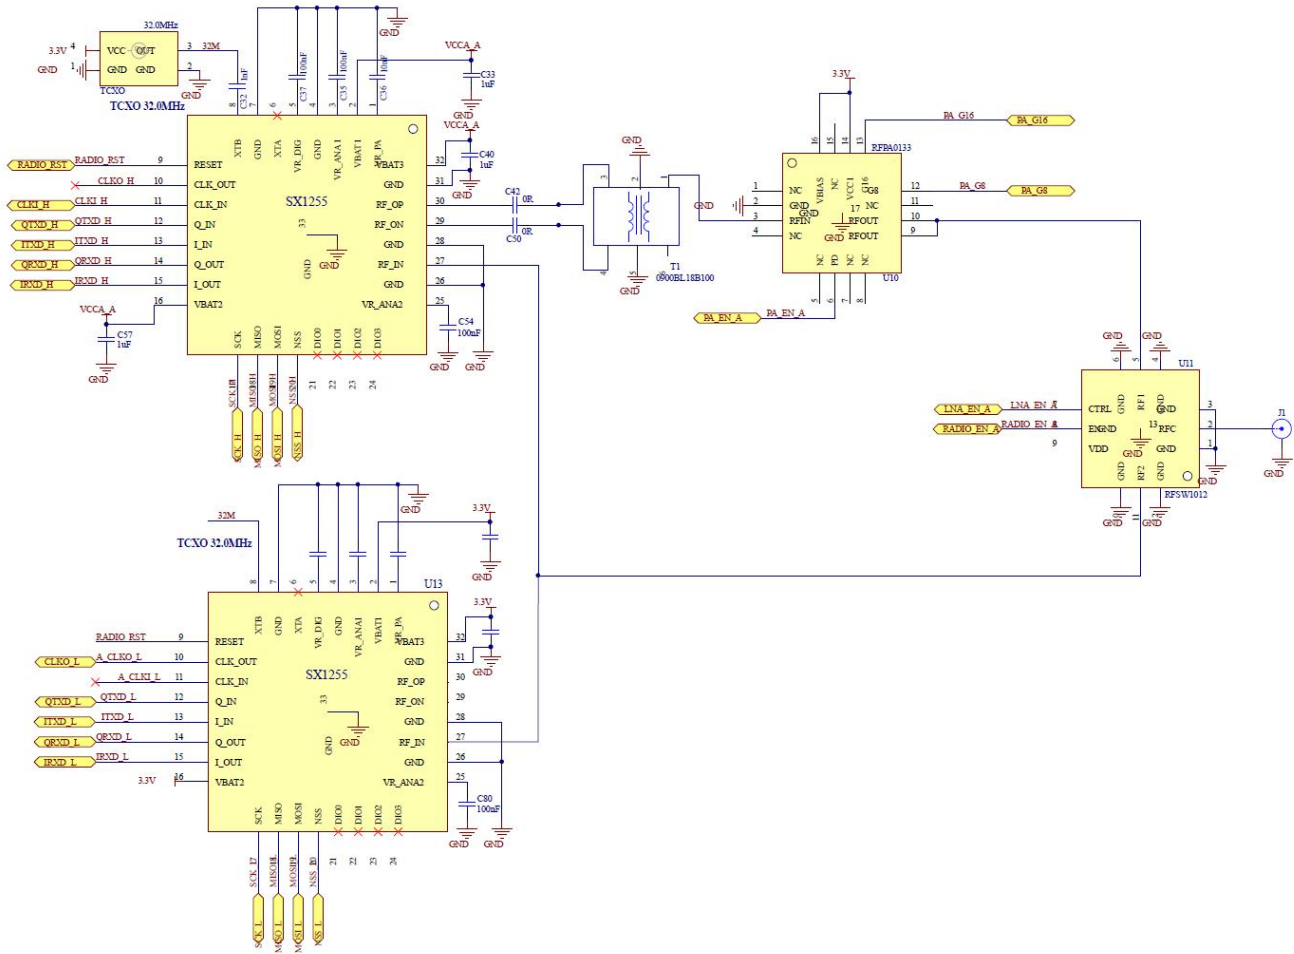

Figure 3: MPCI-GW2 series inner schematic.

For further details regarding schematic please refer "SX1301DVK_e286v02a_sch_layout" from Semtech.

7. Reference application

Figure 4 shows the minimum application schematic of MPCI-GW2 series modules. Uses at least 3.3V/1A DC power, connect SPI interface or USB interface to the main processor. If uses SPI interface SPDT_SEL should be tied to GND otherwise just let this pin open.

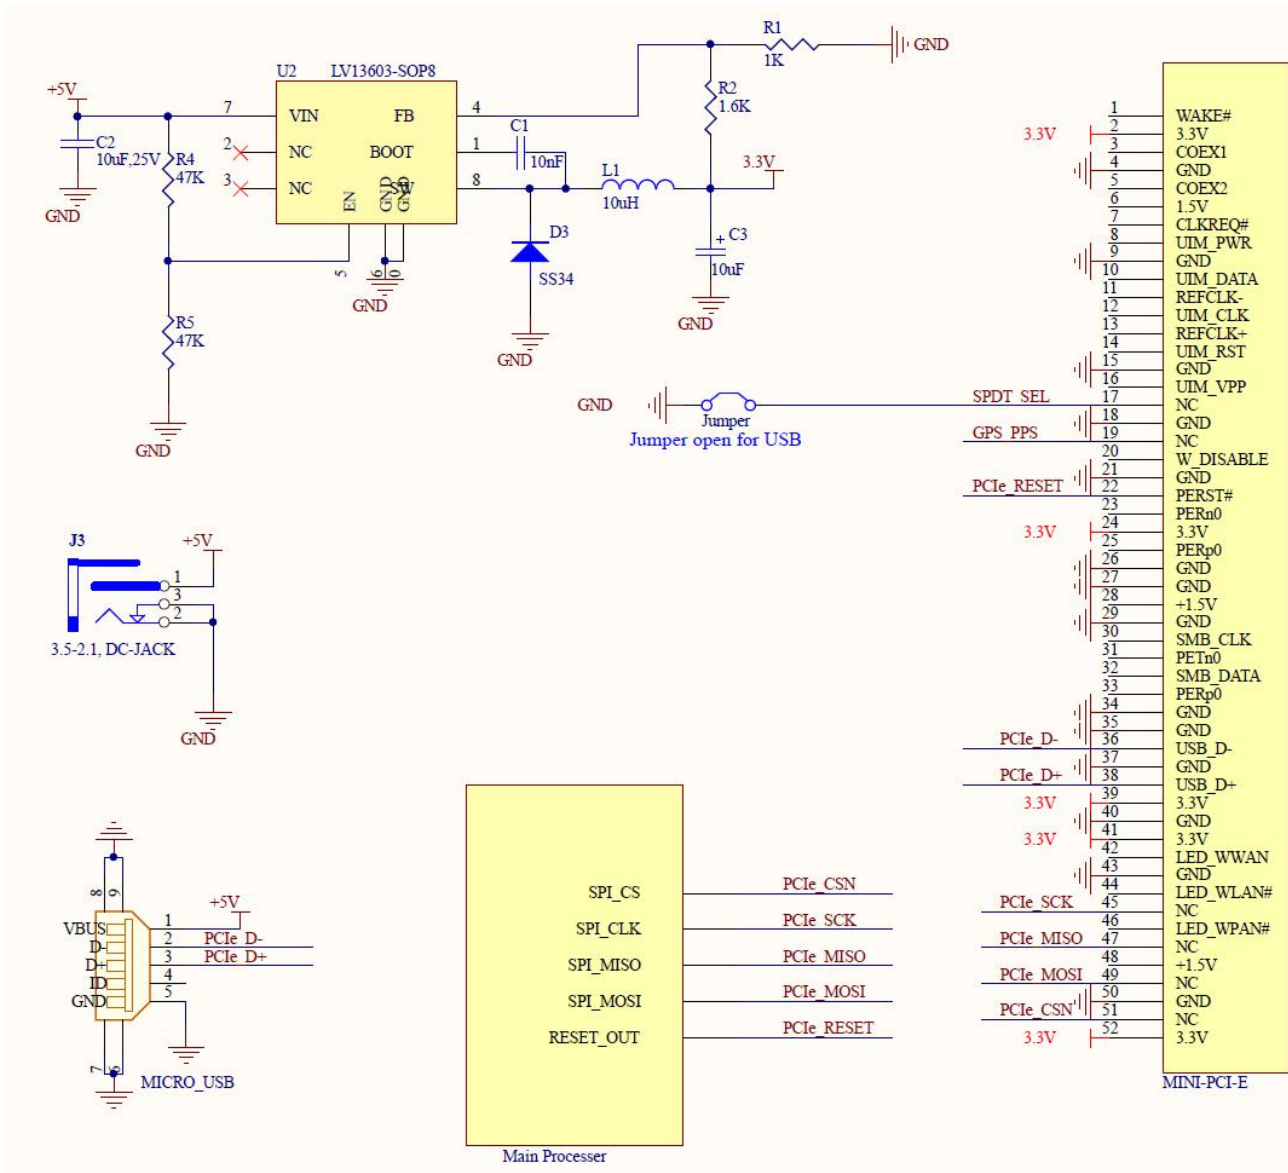

Figure 4: MPCI-GW2 series reference minimum schematic.
